

## What Do I Need For This Course?

This course is meant for individuals who are **not familiar with microcontrollers and/or the C programming language**.

Additionally, **for more experienced individuals, the course will expedite the learning curve** for the Texas Instruments MSP430 and Code Composer Studio integrated development environment.

To receive the maximum benefit of the course, students will need:

1. The Texas Instruments (TI) software development tool, Code Composer Studio (CCS). This is a free download. Details for downloading CCS are included in the first laboratory manual.
2. A TI MSP430FR6989 Launchpad board. This is available from a number of different electronics distributors and Texas Instruments. It has the TI part number **MSP-EXP430FR6989**.

[Texas Instruments MSP430FR6989 Launchpad Order Site](#)

3. A small variety of electronic components including a prototype board, resistors, light emitting diodes (LEDs), switches, wires.

TI has partnered with one distributor, element14, to make all of the electronic components available in a lab kit:

If you would prefer to order the components separately, or check to see if you already have some of the components, we have listed everything you need on the next page.

If you have any questions about what is required, or just need to check on a component, please send me a message -- we are here to help! :)

MSP-EXP430FR6989

Red LEDs

Yellow LEDs

Green LEDs

Wire Jumpers (male-female)

Wire Jumpers (male-male)

Wire Jumpers (female-female)

Push-button Switches

100 $\Omega$  resistors

470 $\Omega$  resistors

Potentiometer

TI TLC5615CP  
Digital-to-Analog Converter

Breadboard

All tutorials and software examples included herewith are intended solely for educational purposes. The material is provided in an “as is” condition. Any express or implied warranties, including, but not limited to the implied warranties of merchantability and fitness for particular purposes are disclaimed.

The software examples are self-contained low-level programs that typically demonstrate a single peripheral function or device feature in a highly concise manner. Therefore, the code may rely on the device's power-on default register values and settings such as the clock configuration and care must be taken when combining code from several examples to avoid potential side effects. Additionally, the tutorials and software examples should not be considered for use in life support devices or systems or mission critical devices or systems.

In no event shall the owner or contributors to the tutorials and software be liable for any direct, indirect, incidental, special, exemplary, or consequential damages (including, but not limited to, procurement of substitute goods or services; loss of use, data, or profits; or business interruption) however caused and on any theory of liability, whether in contract, strict liability, or tort (including negligence or otherwise) arising in any way out of the use of this software, even if advised of the possibility of such damage.
